

Brainstorming & Idea Prioritization

Date	15 September 2026
Team ID	SWTID-2026-3833
Project Name	AI StudyBuddy API
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member listed ideas independently during the kickoff session on 15 September 2026, before grouping and rating them.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Bharathi V	A centralized backend so students stop juggling scattered notes, PDFs and textbooks, with secure JWT-protected accounts	Backend / Security	1
2	Bharathi V	Role-Based Access Control so Students and Administrators get different privileges on the same platform	Backend / Security	1
3	Lereina K A	Store uploaded study materials and every AI-generated resource in MongoDB Atlas for reliable, centralized retrieval	Data Modeling	1
4	Mageshwaran S	Use Google Gemini to turn any uploaded material into a concise, easy-to-revise summary	Generative AI	1
5	Mageshwaran S	AI-generated flashcards (question/answer pairs) for active-recall revision instead of manually writing them	Generative AI	1
6	Yoga Prasanna J	AI-generated multiple-choice quizzes so students can self-assess before an exam	Generative AI	1
7	Yoga Prasanna J	AI-generated personalized study plans based on exam dates and available time	Generative AI	1
8	Deepa Tracy Wins C	Restrict uploads to safe, study-relevant file types (.txt, .md, .pdf) with a sensible file-size cap	Backend / Validation	1
9	Deepa Tracy Wins C	A future collaborative study-group feature where students can share AI-generated resources with classmates	Future Scope	2

Step 2: Idea Prioritization

Group No.	Final Idea	Feasibility	Importance	Priority	Selected (Yes/No)
1	AI StudyBuddy – a secure backend that turns any uploaded study material into AI-generated summaries, flashcards, quizzes and personalized study plans via Google Gemini	High	High	High	Yes
2	Collaborative study-group sharing of AI-generated resources between students	Medium	Medium	Medium	No – deferred to future roadmap (see Scalability & Future Plan)

Group 1 was selected as the team's final idea for the 15–29 September 2026 build cycle because it directly combined the team's strongest skills (Node.js/Express backend, MongoDB Atlas/Mongoose, and Generative AI integration) with a clear, demonstrable academic problem every team member experiences firsthand.
